

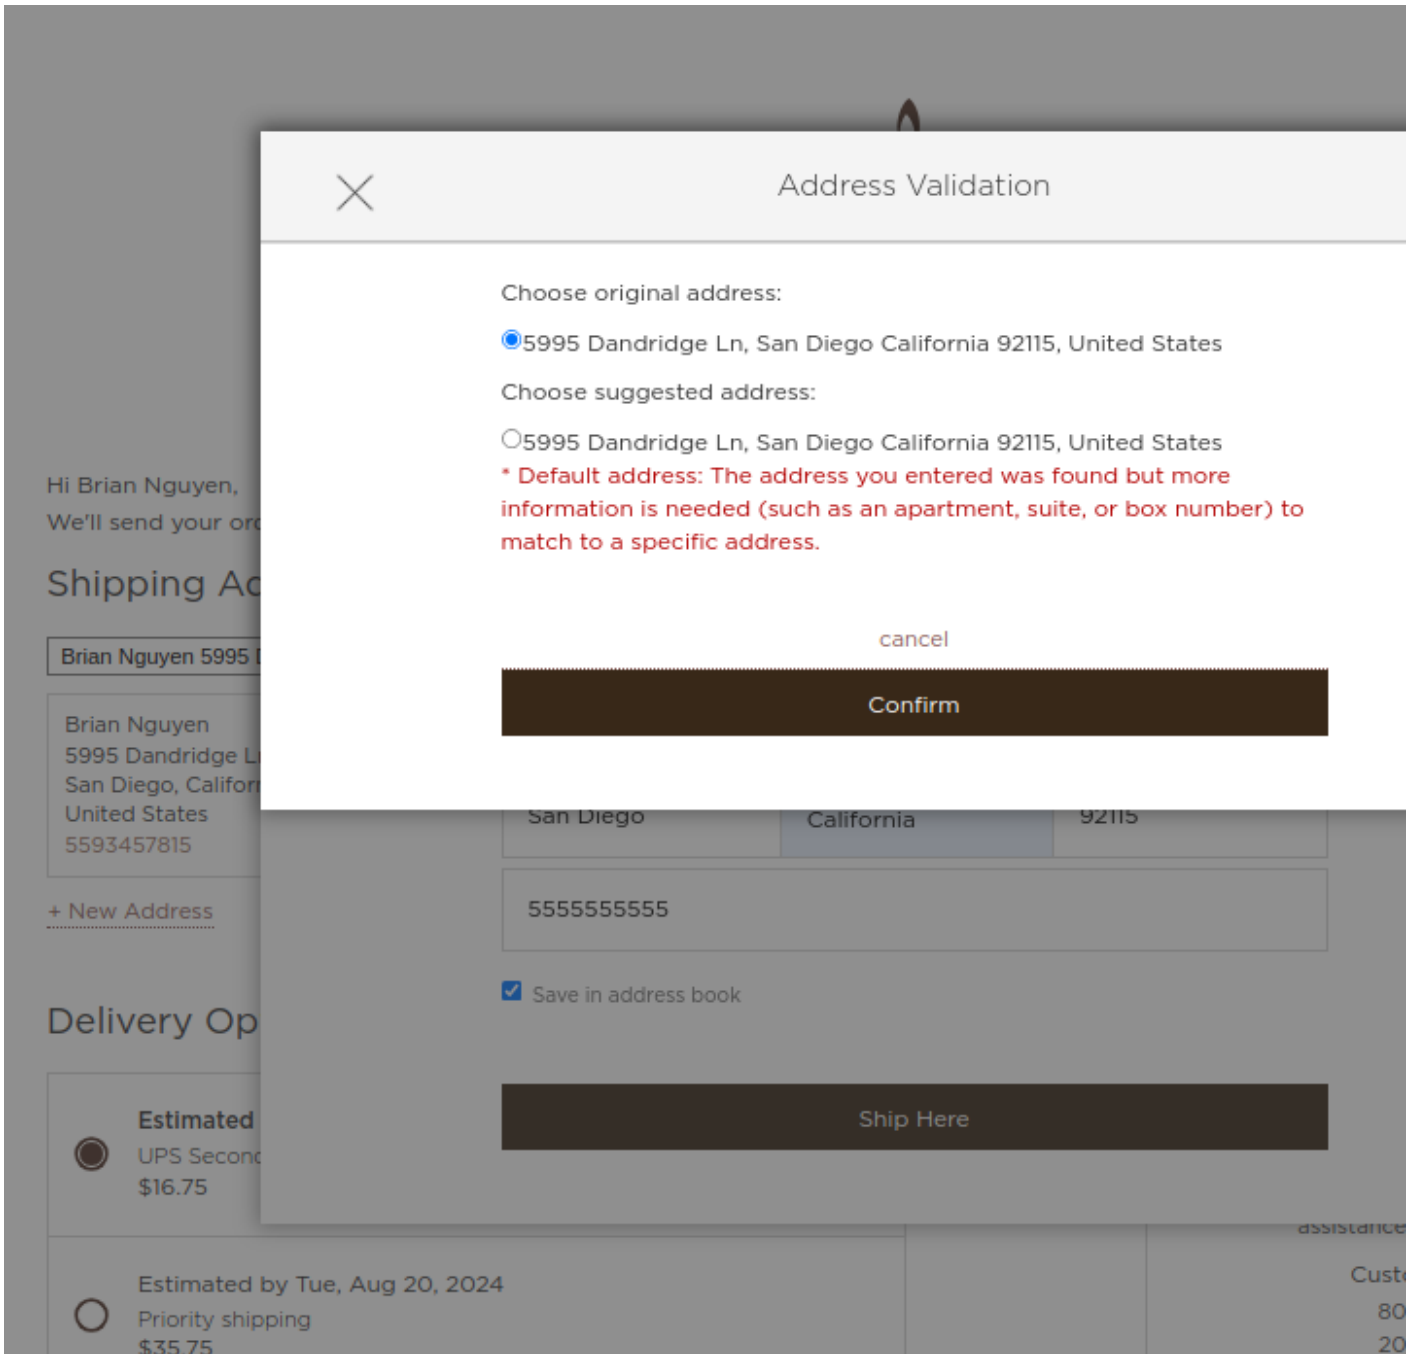

Mapping of which page loads which template and javascript

Going forward towards year 2026; our plan is to consolidate all address-validation scripts into two JS files:

- Backend: `app/code/Frans/AddressValidation/view/adminhtml/web/js/addrval.js`
- Frontend: `app/code/Frans/CheckoutViews/view/frontend/web/js/addrvallib.js`

In 2025, here are the mappings of which page loads which template and javascript that is related to Address Validation.

1/ FE checkout New Address popup:

Related js files:

app/code/Frans/CheckoutViews/view/frontend/web/js/view/shipping.js

Related template files:

app/code/Frans/CheckoutViews/view/frontend/web/template/shipping.html

2/ FE Checkout billing address:

Related js files: app/design/frontend/Frans/default/Magento_Checkout/web/js/view/billing-address.js

Related template files: app/code/Frans/CheckoutViews/view/frontend/requirejs-config.js
