

# Magento dev tricks and tips

## 1/ To debug email sending code:

For example, when placing an order in FrontEnd; the order immediately gets marked as processed; and the quote is cleared. In order to debug sending email:

in file `vendor/magento/module-checkout/Controller/Onepage/Success.php`, disable this code:  
`\$session->clearQuote();`

## 2/ Store object in memory per session

There is a deprecated technique still being used in Magento: use registry to store objects in memory.

Example:

```
$this->registry->unregister('current_creditmemo');  
$this->registry->register('current_creditmemo', $creditmemo);
```
